 YUCERA

AESTHETIC STAINING KIT

Aesthetic Staining Kit

Yucera Aesthetic Staining Kit includes 13 internal stain colors + 2 opaque liquids. It enables precise internal staining of restorations before sintering, easily reproducing the color layering and aesthetic effects of natural teeth. Featuring a ready-to-use formula, it requires no mixing or preparation—simply open the cap and apply directly to the surface of the treated restoration to complete coloring, greatly simplifying the workflow. When used together with Yucera's matching zirconia blocks and glaze paste, it ensures stable and consistent shade results of restorations with natural and lifelike aesthetic results.

13 Shades. Naturally Precise

The Yucera Staining Aesthetic Kit delivers a complete "3+10" color matrix—three tetracycline shade families (gray, yellow, brown) plus ten additional shades: yellow, brown, chalk, gray, blue, pink, red, purple, and two incisal effects (blue + gray). From routine restorations to advanced custom shade matching—one kit does it all.

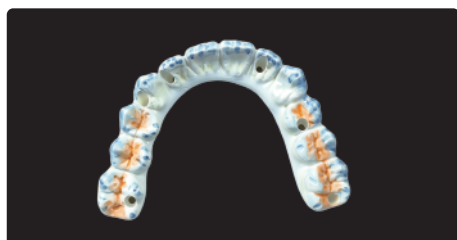

Efficient Brush-On Technique

Featuring an innovative "brush-on" internal staining method—just brush and stain, dramatically reducing coloring time. The staining liquid is 100% biocompatible, enabling precise micro-customization to match each patient's natural tooth characteristics.

High masking ability

Opaque Liquid V1 Reagent : Shade A Reagent = 3:1. Mix and brush on 1–2 coats; no additional steps required. Effectively masks implant abutments, dark abutment teeth, and metal backgrounds while preserving the restoration's natural translucent quality.

Built for Complex Cases

Precisely suited to challenging aesthetic scenarios—tetracycline teeth, fluorosis, chalky white, and gingival-colored areas. With excellent one-time even coloring, it delivers stable, ideal results without additional external staining. A reliable color solution for difficult restorations.
